

CH  
Corrected

1 The BIS gateway assigns a batch ID to the statement batch and a  
2 statement ID to each statement in the batch (step 298). The statement data  
3 translator 27 calls via the batch handler 140 into the parcel manager  
4 interface 224 to create a statement batch parcel (step 300). The batch  
5 parcel contains the following information: biller ID, batch ID, template  
6 ID, template rule ID, resource table records, statement table records, and  
7 industry table records. The batch parcel is sent to the service center during  
8 the next connection with the service center (step 302). The service center  
9 processes the batch parcel and loads the data into the service center  
10 database (step 304). The service center's parcel manager generates and  
11 returns a bulletin indicating that the batch has been received and loaded at  
12 the service center (step 306).

### 13 14 **In the Drawings**

15 The Office Action objected to the drawings. In accordance with 37 C.F.R. § 1.121(d),  
16 submitted herewith, by separate papers, are corrected Figures 1, 3, and 6, as indicated in  
17 red, and respective formal copies thereof. The corrections are supported in the  
18 specification, as amended.
